

AT LAST!

The problems of vacuuming have been solved with the introduction of the VerveVac range of central vacuum systems.

Powerful suction thoroughly removes dust from your environment in a solution that is convenient, easy to use & empty. VerveVac offers affordable vacuum systems built to last with a seven year warranty.

Clean Powerful Suction - In Two Sizes

Both VerveVac vacuum systems provide powerful suction one can rely on every time. Vacuum with confidence and quickly lift dust from all surfaces.

Typically located in the garage, the VerveVac system will collect dust in a highly efficient manner so you don't have to breath it in during operation or while emptying.

Two sizes; VVS100K (17 litres) occupying little space or the VVS200K with greater capacity (41 litres).

\$1099
VVS100K

\$1,199
VVS200K

- Outstanding suction
- Quiet operation
- Compact design
- Large capacity
- Easy to empty
- Quality internal filter
- Dust bag included
- Made in Canada
- 5 year system warranty
- Telescopic wand
- 10m hose
- Wall hanger
- Combo floor tool
- Hard floor tool
- Dusting tool
- Crevice tool
- Upholstery tool

At Your Service - Throughout Your Home

Plug a hose into any inlet and you are instantly ready to vacuum with powerful and reliable suction across every inch of your home. VerveVac central vacuum systems are powerful, convenient, easy to use, made in Canada & backed by a 7 year warranty. Extremely quiet in operation, they will not disturb the whole house or your neighbours!

7 YEAR SYSTEM WARRANTY

VERVEVAC

Clean Powerful Suction. At Your Service.

NOT GOOD ENOUGH!

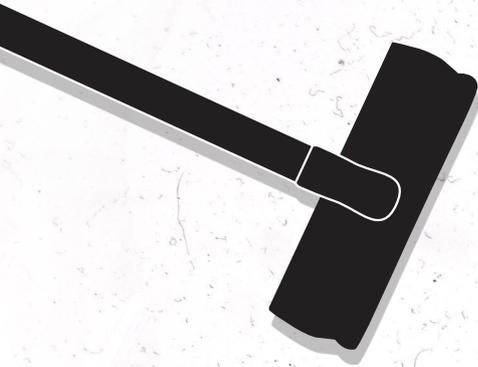

Clearly vacuuming shouldn't be this HARD! In spite of all the phenomenal human achievements, our vacuum systems are still in the DARK AGES. Small often cosmetic refinements are made on systems which are fundamentally inadequate...

Weak Suction

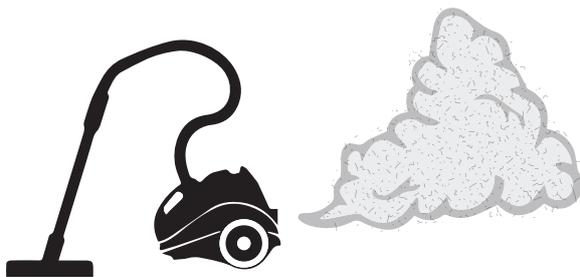

Because portable vacuums must be light to carry, they use small weak motors. No matter how smart the engineering is, the suction will always be inferior. The lighter a portable vacuum is, the more disappointing suction will be.

With a portable vacuum, we have little choice but to go slow and cover the same area again and again with the hope that it will eventually achieve a decent result.

Dust Recirculating...

Portable vacuums release dust back into the same environment from which we are trying to remove it. As air flows through the vacuum, dust is inadvertently released from the rear. The dust we wanted to remove from our home is now airborne, in our lungs and falling back down onto our furniture and floor.

Expensive

Big prices & small warranties. Ouch! The costs of constantly servicing and replacing these inadequate vacuums will add up over time.

Face Full Of Dust (FFOD)

Emptying a portable vacuum often leaves you with a face full of dust (FFOD). Not to mention your lungs!

Cumbersome

Portable vacuums are heavy and hard to use. As one tows them around the home, it is easy to damage furniture. With stairs, it gets even harder.

Multiple vacuums are bought in an attempt to mix the power of a bulky vacuum with the convenience of a smaller vacuum such as a stick vacuum. The end result is a frustrating mix of terrible suction and handling issues.
